PROFESSIONAL SUMMARY

Cloud Engineer and Certified Solutions Architect with hands-on experience designing, deploying, monitoring, and automating cloud-native systems on AWS. Proven ability to architect event-driven, serverless, and self-healing solutions using Cloud Services inclusive of EC2, Lambda, CloudWatch, EventBridge, Systems Manager, API Gateway, DynamoDB, and S3. Strong foundation in cloud security (IAM, encryption, least privilege), infrastructure as code (AWS CDK), and CI/CD automation, with experience supporting both application and operational workloads. Passionate about building reliable, scalable, and cost-aware cloud architectures aligned with real-world production scenarios.

TECHNICAL SKILLS

- **Cloud Platforms & Services:** EC2, Lambda, API Gateway, S3, DynamoDB, CloudWatch, EventBridge, Systems Manager (SSM), SNS, IAM, KMS, Textract, Bedrock, Aurora, RDS, Google Firebase
- **Languages:** AWS CDK (Typescript & Python), HTML, CSS, JavaScript, TypeScript, Java, PHP, Python
- **Frameworks & Libraries:** Vue.js, Nuxt.js, Fast API, Node.js, React Native, Tailwind CSS, Bootstrap, Firebase, Ionic, Capacitor, Flutter, Three.js
- **Databases:** PostgreSQL, MySQL, Oracle, SQL Server Management Studio (SSMS)
- **Version Control & DevOps:** Git & GitHub, Github Actions Pipeline, Render, Netlify
- **Tools:** Linux CLI, VS Code, Cursor, Eclipse, Android Studio, PyCharm
- **Soft Skills:** People Management, Excellent communication, Rapport Building

TECHNICAL EXPERIENCE

Full Stack Developer

December 2025

TodoApp: Serverless Task Management Platform

[Demo](#) | [Code Link](#)

- **Problem Addressed:** Organizations needed a scalable, secure task management solution without the overhead of traditional server infrastructure, requiring robust authentication and cost-effective data persistence.
- **Development:** Built a serverless REST API using AWS CDK (TypeScript), API Gateway, Lambda (Node.js), DynamoDB with KMS encryption, and Cognito JWT authentication. Implemented 5 Lambda functions for CRUD operations with centralized validation, error handling, and security utilities. Designed a multi-stack CDK architecture for modular deployment and infrastructure management.
- **Challenge:** Ensuring secure, scalable operations across distributed serverless components while maintaining cost efficiency, consistent error handling, and proper authentication across all endpoints.
- **Solution:** Implemented a security-first architecture with Cognito JWT authentication, KMS-encrypted DynamoDB storage, and standardized error handling. Configured API Gateway with rate limiting (100 burst, 50 sustained), CORS, and security headers. Used pay-per-request DynamoDB billing and modular CDK stacks for scalable, cost-effective infrastructure deployment.

AI Genie: Document Intelligence Platform

[Demo](#) | [Code Link](#)

- **Problem Addressed:** Teams waste hours manually extracting and summarizing information from documents and images, delaying decision-making and increasing operational overhead.
- **Development:** Designed and built a serverless document intelligence platform using AWS Lambda, API Gateway, Amazon Textract, and Amazon Bedrock. Implemented automated text extraction, AI-powered summarization, and Q&A capabilities with secure file upload via presigned URLs and API key authentication.
- **Challenge:** Processing large PDF/image files without timeouts while maintaining low latency, cost efficiency, and data security compliance.
- **Solution:** Engineered a serverless architecture with ephemeral S3 storage (auto-deleted after 1 day), asynchronous processing pipelines, and infrastructure-as-code deployment via AWS Typescript CDK with GitHub Actions CI/CD, reducing document processing time by over 95% compared to manual methods.

AWS Incident Response & Auto-Remediation Lab

November 2025

AWS: EC2, CloudWatch, EventBridge, Lambda, Systems Manager (SSM), SNS, IAM

- **Problem Addressed:** Production EC2 workloads can experience outages or performance degradation, requiring rapid detection and recovery to minimize downtime and operational risk. Manual monitoring and intervention do not scale and delay incident resolution.
- **Development:** Designed and built an automated incident detection and response system on AWS using EC2, CloudWatch, EventBridge, Lambda, and Systems Manager (SSM). Configured instance-level CloudWatch alarms for infrastructure health and CPU utilization, integrated event-driven workflows via EventBridge, and implemented Lambda-based remediation logic to execute SSM Run Commands for service recovery.
- **Challenge:** Accurately distinguishing between infrastructure-level failures and application-level stress, tuning CloudWatch alarm thresholds on burstable EC2 instances, and preventing false positives while ensuring remediation executed reliably without manual intervention or SSH access.
- **Solution:** Architected a self-healing, event-driven remediation workflow where CloudWatch alarms trigger EventBridge rules that invoke Lambda to automatically restart affected services via SSM. Validated the design through controlled failure simulations (CPU stress and service outages), confirming alarm state transitions, automated recovery, and restoration of application health with centralized logging and least-privilege IAM roles.

EDUCATION

Computer Programming Diploma

January 2024 – August 2025

Algonquin College, Ottawa, ON

- Graduated with Honours GPA: 3.87

BSc. Economics

January 2020 – July 2023

Babcock University, Ogun State, Nigeria

- GPA: 3.97/5.0

CERTIFICATIONS

- **AWS Certified Solutions Architect** - Issued by Amazon Web Services (AWS) | **December 2025**
- **AWS Certified AI Practitioner** - Issued by Amazon Web Services (AWS) | **March 2025**
- **AWS Certified Cloud Practitioner** - Issued by Amazon Web Services (AWS) | **December 2024**
